

Sprint 2 Report - GeoBus by Bus Squad (Android)

11/7/2015

Actions to stop doing

The team should make an effort to meet every day they are supposed to. Failing to meet can cause problems and delays.

Actions to start doing

The team should start writing the documentation for the project.

The team should have a better idea on time estimates. Now with some experience, we can see what is and isn't feasible within a sprint's time period and can plan more accurately.

Actions to keep doing

The team should continue to work together to resolve programming related issues.

The team should continue to add updated user story info to a spreadsheet we have so we can once again easily consolidate it into a cleaner document later on.

Work completed/not completed

- Completed
 - Parse the XML with the data from the buses to something our app can use.
 - Get the data from the XML file each time it refreshes.
 - Display all buses on the map.
 - Update all the buses each time the XML updates.
 - Show static schedules for every route.
 - Coordinate and agree on aesthetics.
 - Design icons.
 - Animate markers for smooth position updates.
 - Make the info window where the information is displayed.
 - User the GitHub repository.
 - Figure out representation of routes on Google Maps API.
- Not completed
 - Draw arrow/cursor from marker towards immediate direction of travel.
 - Show dynamic schedules for every route.
 - Display upcoming buses on each bus stop.
 - Update information about upcoming buses.
 - Draw buses route on map when selected by the user.
